INTRODUCTION

The purpose of this Statistical Handbook is to provide ready access to published international trade and trade-related data which are of most relevance and use in the on-going debate and discussion of the bilateral and multilateral trade negotiations currently underway. The Statistical Handbook is intended to provide statistics for a person with an interest in these negotiations, and is not intended for the specialist wishing to obtain detailed analytical data. Consequently the statistics consist largely of the most recent annual data and are selective — to have provided all of the available published trade statistics would simply swamp the typical user of this handbook in reams of detailed tables. Nevertheless, the selected data do provide provincial, industrial and commodity details.

The Statistical Handbook is divided into five major parts, each in turn focusing on basic economic data, basic trade data, trade-related data, data on specific major issues being covered in the negotiations, and data for a number of industries. Sources are clearly cited throughout, and necessary explanatory notes to the statistics are provided.

A. Basic Economic Data

In the first table, comparable data on population, labour force, output and trade are provided for Canada and nine of its major trading partners. The remaining tables provide information on Canada's population, employment and output by major industry and by province, as well as nationally.

B. Basic Trade Data

Canada's current account data and exchange rates are provided, along with a summary table showing the main components of the U.S. current account. The other tables present the main categories of Canadian merchandise exports and imports by province, as well as the main commodities exported.

C. Trade-Related Data

The initial two tables summarize the main elements of Canada's investment abroad, and of foreign investment in Canada. The remaining table provides examples of some of the high and low rates of tariffs of Canada and the United States.

D. Special Issues

These tables provide statistics and information on various aspects of trade (for example, energy and agriculture) which are subject to negotiations and are not easily incorporated in the preceeding sections. In addition, reconciliation of Canadian and U.S. trade data are provided.

E. Selected Statistics for Manufacturing Industries

Summary data for 23 industries are provided, these industries usually being those associated with a Sectoral Advisory Group on International Trade (SAGIT). Some of the data are based on the 1980 Standard Industrial Classification (SIC), and others on the 1970 SIC. The resulting discrepancies are usually negligible, except for clothing, knitting and textiles.

F. Selected Statistics for Service Industries

Summary data for selected service sectors are likewise provided.

In addition to these data, there is a short reference section (G) in which the more important sources of data are provided.

This present Handbook updates the earlier one which was the result of the work of numerous people. Planning and compilation were done by Albert Meguerditchian, Lucie Laliberte' and Philip Cross of Statistics Canada, John Flood of External Affairs, Gerry Salembier of Finance, and Linda Kettela and Louis Parai of the Trade Negotiations Office; tabulations were provided by numerous people at Statistics Canada and External Affairs.

G. FURTHER REFERENCES

Additional international and trade-related data may be found in many official publications.

The more accessible and/or more relevant ones are the following:

International Data/Sources

OECD, *Main Economic Indicators* (monthly) provides the most current trade and economic data for many countries, along with the annual *Main Economic Indicators Historical Statistics*.

I.M.F., *International Financial Statistics* (monthly) and the *Annual International Financial Statistics Yearbook* likewise provide data for many countries.

OECD, *Balance of Payments of OECD Countries* provides historical data.

OECD, *Historical Statistics of Foreign Trade*.

United States Data/Sources

U.S. Bureau of the Census, Bureau of Economic Analysis, *Survey of Current Business* (monthly) provides the most current data.

U.S. Department of Commerce, *Highlights of U.S. Export and Import Trade* (monthly).

Canadian Data/Sources

Statistics Canada, *Canadian Statistical Review*, (monthly).

Bank of Canada, *Bank of Canada Review*, (monthly).

These two provide the most recent data.

Department of External Affairs, *Canada's Bilateral Relations: Some Key Statistics*, Volume I.

Department of External Affairs, *Canada's Bilateral Relations: Some Key Statistics (By Country)*, Volume II.

Department of External Affairs, *Canadian Domestic Exports to Individual U.S. States: 1986*.

Department of External Affairs, *Canadian Imports from Individual U.S. States: 1986.*

These four publications summarize a large amount of trade data.

Department of Regional Industrial Expansion, *Commodity Trade by Industrial Sector: Historical Summary: 1966-1985.*

Department of Regional Industrial Expansion, *Commodity Trade by Industrial Sector with EEC (10): Historical Summary: 1966-1985.*

NOTES
(1) GDP and trade data are provided by each country and converted into U.S. $ by the OECD.
(2) Exports and imports may vary from those reported by partner countries.
(3) Total current account minus merchandise trade equals non-merchandise trade.
(4) These rates are standardized by the OECD and may differ from national definitions. See the OECD Economic Outlook for December 1986 No. 40 for a further explanation.

NOTES:

— Canada and the United States each publish their own trade statistics. Each country's data continue to be mainly derived from sources from within that country. Although conceptually the one country's imports equal the other country's exports, the published statistics of these flows do differ — for various reasons, including differences in definitions, the sources of the data, timing of the transactions and errors. Accordingly, trade statistics of Canada and the United States are reconciled to arrive at the best measure of bilateral trade between the two countries, accepted by Statistics Canada and the U.S. Bureau of the Census. The reconciliation process is now published quarterly.

— In the above (annual) table released by Statistics Canada and the U.S. Bureau of the Census, the values are expressed in both Canadian and U.S. dollars. The trade balance is presented from the Canadian standpoint (and figures in parentheses denote a deficit).

— Details of the reconciliation are given in the source cited. It may be noted that the major part of the reconciliation arises from the incomplete nature of each country's export data, particularly that of the U.S. (That is, documentation of exports tends to be less complete than of imports, as imports are of more concern to customs officers who collect the necessary tariff duties.)

— Statistics Canada, in its release, notes that "The reconciled trade balance has always been closer to the Canadian published figure than to the balance published by the United States. Moreover, the gap between these two balances has grown very fast in 1986, some $16.0 billion separated them compared to $11.1 billion in 1985, and $9.8 billion in 1984." As a result, new reconciliation procedures, and quarterly published information, were introduced in 1987 by Statistics Canada and the U.S. Bureau of the Census.

CANADA/UNITED STATES RECONCILIATION: CURRENT ACCOUNT STATISTICS, 1984, 1985: ADDITIONAL NOTES TABLE D.7.02

The reconciliation of the 1985 bilateral current account statistics of Canada and the United States as published by the two countries has recently been completed, together with revisions to the 1984 reconciliation. The reconciliation is done jointly by Statistics Canada and the United States Bureau of Economic Analysis.

The following notes are basically taken from the source publication.

On the basis of the conceptual framework established for the reconciliation exercise, the 1985 reconciliation shows a current account surplus for Canada (deficit for the United States) of U.S. $7.5 billion from Canadian sources (U.S. $7.6 billion from United States sources). As the 1985 data are still preliminary, these values may be revised in future years. The revised 1984 bilateral estimates show a Canadian surplus of U.S. $6.6 billion and U.S. $6.7 billion from Canadian and United States sources, respectively.

This reconciliation incorporates the results of the merchandise trade reconciliation agreed to by Statistics Canada and the U.S. Bureau of the Census. (See the preceding Table D.7.01 for this information.)

The conceptual framework adopted for the reconciliation requires major adjustments to be made to the published data of the two countries. It is important to note that this reconciliation is done within a mutually accepted framework established by statisticians. Accordingly, adjustments are made to take into account differences in published data due to differences in sources and in concepts — and the availability of supporting data to make necessary adjustments often affect the concepts used in the reconciliation. Hence the reconciled data should not be interpreted as the final word on what are the best conceptual measures of the current account payments, receipts and balances.

For purposes of reconciliation, the U.S. data on investment income shown in Table D.7.02 above excludes reinvested earnings of incorporated affiliates in order to be comparable with Canadian data. The current account statistics published by the U.S. in the Survey of Current Business would include reinvested earnings.

Other adjustments require the grossing of some transactions which are recorded on a net basis in the published series. Further adjustments are made to allow for differences in the conceptual treatment of certain transactions, and the comparative coverage of Canadian and U.S. data sources associated with particular items.

Revisions based on the reconciliation are incorporated, wherever possible, in the published series of Canada and the United States. It is not possible, however, to incorporate the individually reconciled series fully into the regularly published data because of conceptual differences between the methodologies established for the bilateral reconciliation and those used in the published balance of payments series of the two countries.
